## ■ Working Experience

### Align Technology

Full Stack Developer

2018.07 - Now

I was the second one to join this new team, we called it 'Digital Development Team'. We were facing with a big problem at the time when we are joining the company. The existing code(especially the frontend code) is really hard to maintain. We need to figure out how to improve it and work on it with new features. By fighting with the 10000 lines JS file and 10000 lines CSS file, my front-end skills have improved rapidly. And we need to work on more than 14 projects the same time, so my multiline processing ability have been honed.

// Add this after I went though the introduction of APOLLO

By the way I need to work with Salesforce by HerokuConnect every day. All our leads data been saved in SFDC. I'm working on a very long SQL these days to get the correct value from our leads. I almost forgot to mention this. But I think I'd better to remember it, because you must be interested in this. : )

### ACTIVE Network

Ruby on Rails Developer

2014.11 - 2018.07

Joined newly built team when on aboard (data visualization team), the tech stack is based on Ember, D3, Rails. We used Agile in routine work and always do pair programming with developers in NA team. In our project, Rails act as an API server and provide the apis by using 'active\_model\_serializers'. We need to ensure the test coverage be higher than 95%. The biggest challenge for us is to handle the complex business logic and keep the readability and good structure of the code the same time. In order to reach this goal, we set up many conventions, like 'DRY', 'no more than 5 lines method', 'one method one thing', etc. Except these rules, we also have a good developing process to ensure the quality, like a good Code Review work and self-QA things.

### CNE Pay

Ruby on Rails Engineer

2014.03 - 2014.11

We created a crowdfunding site which is called '权益宝'. I worked with two front-end developers to work out the version 1.0. I was responsible for all backend things, like DB, server, development and deployment. It's really a big challenge for me at that time.

## [Digiarty Software](#)

Rails Developer

2013.04 - 2014.01

This is my first Rails job. I had no Rails experience in project before. After joined the company, I set up the development environment with the help from other senior team member. And in the following month, I went through an existing project to familiar with the design and the theory of how does a web project working. After that, I was moved to a new team which will be responsible for a new web game project and I was the key member for backend logic. There is another guy who was using C++ to build the server. When I recall what I did at that time, yes, it's far from good, but it is my first novel in my life.

## [Avvo](#)

Ruby Developer

2012.01 - 2013.03

Yeah, the time is back here. This is my first job as a programmer. Before it, I was a technician in Gas station. One of the reason for me to have a career change is because I'm interested in programming. My graduation design is to use C language to calculate the grid voltage and current of 12 nodes by using an algorithm. I got an award by doing this. Let's come back to my Ruby job, you can guess I don't know what is Ruby, what is Web and not to mention what is Rails at that time. I have a mentor to guide me in daily work, but I had to read books about Ruby programming at the time out of work. 'Resque' a background job framework is just like a mysterious stuff for me at that time. Also the Linux system is also like someone in the dark. And for 'Vim', I have to say it's the most impersonal editor at that time. But now, I'm using Vim every day for my daily work.

// Add this after I went through the JD

My daily work in this team is to use a modular programming tool to grab data from many other sites and then use Ruby script to analyze and filter and save back to database.

---

## ■ Education

SWPU (Southwest petroleum university)

Bachelor's degree · Electrical Engineering

Graduated in  
2011

---

## ■ About me

I'm a web developer and I'm proud of this title. The world has changed a lot because of us and it will keep changing because of us. I'm father at the same time, but my child is not by my side for some reason. I've been waiting for a good opportunity to have a remote job and then I can stay with my daughter. The happiest thing in the world is doing things you love and being with your family.

I think Apollo is worth for me to have a try.
